BRUSHING SOLUTIONS IN PRACTICE

For more than a century, KULLEN-KOTI has stood for cutting-edge product development in the field of industrial and technical brushes. These brushes are used throughout the Building & Construction Industry. Our goal is to add value to the production processes of our clients. Through our years of experience we have developed and manufactured many different types of brushes. Resulting in KULLEN-KOTI becoming a company with a worldwide reputation.

The building and construction industry includes a wide range of activities that results in many different types of applications like:

- Cleaning of moulds, timber-and pressing boards
- Cleaning of conveyor-belts
- Brushing of concrete joints
- Cleaning and sweeping
- Surface finishing
- Wood working

- Sealing of gaps, openings, doors, gates and windows

And many more...

Cleaning

Cleaning of pressing boards

Brushes are used for the cleaning of pressing boards in machinery either before or after treating products, removing dust and rest material and thus assuring the quality of the next product to be treated on the pressing board. Applications: stamp cleaning in presses; stamp cleaning in the production of clinker bricks.

Cleaning of moulds

Cleaning of moulds is most common in building, construction and raw materials. Brushes are used for cleaning of moulds either before or after moulding, removing dust and rest material and thus assuring the quality of the next product to be moulded.

Cleaning of timber boards

Cleaning of timber boards is especially important for the building and construction industry. Brushes are used for cleaning of timber boards after sanding or treatment, preventing splinters and making sure the product is well finished. Application: cleaning of formwork tables in plants.

Cleaning of concrete joints

Brushes are used for brushing loose of semi-solid, fine aggregates such as stones, split and slag at separating and expansion joints. They are used in road and airport construction for the production of expansion joints in new construction, in the renovation or repair.

Cleaning and sweeping

Examples of sweeping duties are cleaning roads, car parks and city centres. In winter our brushes can also be used for snow removal. In factories, our hygiene brushes are ideal for sweeping halls, cleaning work desks and other work materials.

Cleaning of conveyor-belts

Conveyor-belt cleaning is common in almost any market. Brushes clean conveyor-belts after products have been transported and thus assuring the quality of the next batch. Application: cleaning of conveyor belts, for example in gravel works.

Surface finishing

Cleaning and smoothing of concrete slabs

KULLEN-KOTI brushes improve the quality, performance and appearance of concrete products. Our brushes are extremely suitable for creating different textures like rough and fine grooves and structures.

Finishing of natural stones

Our brushes can create a brushed antique effect on a pre-treated surface that is either flamed, squared or sandblasted.

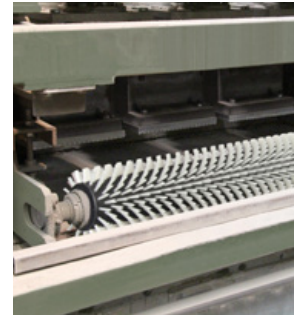

Wood working

In the wood working industry, the most diverse types of wood are processed and handled. KULLEN-KOTI offers a variety of brush solutions for structuring, grinding or dusting of wood surfaces.

Restoration

Removing of rust and paint on different materials. For example the preparation of surfaces like parquet floors when giving a vintage look. An example is the restoration of furniture.

Sealing

Sealing of openings on machines

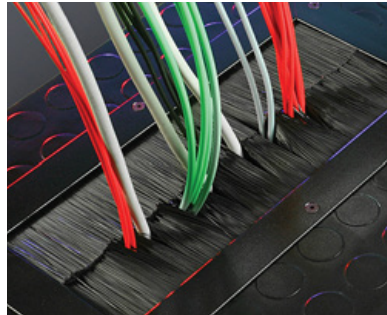

The KULLEN-KOTI strip brushes are for example very suitable for the sealing of parts or machines and protect them from dust, dirt and vermin. Brushes can also be used against noise.

Sealing of gaps

Our brushes can be used for cable management for aesthetic reasons. They are available in a lot of different sizes with different filling materials.

Sealing of doors, gates, and windows

- Brushes are used to prevent draught from entering a room through gaps and openings, like under rotating entry doors or sash windows.
- Brushes are used to prevent heat or cold from escaping a room through gaps and openings.

Industries

KULLEN-KOTI brushes have an added value for your production process or products. Whether it concerns cleaning moulds or structuring, KULLEN-KOTI brushes improve the durability, appearance and functionality of products that require it. KULLEN-KOTI brushes find their application in the following industries:

- Concrete industry
- Clay and cement industry
- Stone and clinker industry
- Marble and granite industry
- Glass industry
- Doors, gates and windows industry
- Road construction, earth movement, road maintenance industries

Test, check, decide

Civil engineers, mechanical engineers or designers who are not sure which brush is best suited for the planned application can get advice from the KULLEN-KOTI Brush Test Centre in Reutlingen. A modern machine park and an expert crew are available there, who are trained in finding the ideal brush solution for applications of all kinds.

Brushing Solutions

We deliver brushes to a wide range of industries and know the specific needs in the most diverse branches. KULLEN-KOTI stands for quality, flexibility and customization, and is also the right partner for small orders.
